

Hi Doctoralia Brasil team,

Scaling Noa in Brazil requires combining analysis and execution at the intersection of Product, Sales, and Operations, which is exactly where I have delivered my strongest results. At Wipro on the Meta Project, I used Power BI, Excel, call listening, and root-cause analysis to identify gaps and guide action while collaborating with global and local stakeholders.

I also led native AI adoption in CRM, increasing usage from 4 to 10 prompts per consultant (+150%). In product work, I structured CRM databases and prototypes with Supabase/PostgreSQL and NocoDB, built n8n automations, and ran A/B tests and funnel analyses. At Meu Barzin, these methods helped identify a 43.9% first-message dropout and guide product and growth priorities.

I bring basic SQL and practical Python rather than advanced data engineering experience. My healthcare exposure is transferable, supported by work in AI and digital products and a documented interest in HealthTech. I would apply this combination to increase Noa adoption, data quality, and operational efficiency at Doctoralia Brasil.

Kevin Augusto Vieira
