

Dear EBANX team,

The opportunity to support Revenue Strategy through data, automation, and cross-functional coordination aligns with my experience in revenue metrics, process improvement, and analytical execution. At Wipro on the Meta Project, I partnered with the MIS team using Power BI and Excel to turn operational data into leadership reports and action plans.

At Meu Barzin, I structured databases in Supabase/PostgreSQL and NocoDB, designed a subscription model, and analyzed acquisition, engagement, and conversion bottlenecks. At Munzner, I tracked CRM, revenue, and ROI for an automated funnel that generated approximately R\$50,000.

I bring advanced Excel, BI, automation, and applied AI experience. I am also transparent about the gaps: my SQL is basic rather than strong; my pricing experience centers on monetization and business-model experiments; and I do not have direct fintech or payments experience. I would apply this analytical foundation while building the depth required to support EBANX's next phase.
