

Hello Playlist team,

The opportunity to combine Revenue Enablement, sales content, technology adoption, and AI closely matches my experience supporting the Meta Project through Wipro. I led Sales Excellence and Sales Productivity pillars, translating product updates into value propositions, pitches, playbooks, and assets for 150+ professionals.

I also drove native AI activation in Meta's proprietary CRM, from onboarding through three weeks of side-by-side coaching. This increased usage from 4 to 10 prompts per day (+150%) and made the operation #1 globally for adoption growth. In a pilot bootcamp, I reduced ramp-up from 6 to 3 months while achieving 100% completion, 90%+ quality, and 90% participant satisfaction.

I can contribute hands-on enablement delivery, content, training, performance analysis, and collaboration across sales, marketing, and operations. My tool-administration experience is stronger in proprietary CRMs and automation than in Salesloft or formal license management, a gap I address transparently alongside a proven ability to learn systems quickly.

Kevin Augusto Vieira
