

Hello RD Station team,

The intersection of RevOps, automation, and AI is central to my experience. At Wipro on the Meta Project, I led CRM AI activation through onboarding, playbooks, and coaching, increasing usage by 150% and making the operation #1 globally for adoption growth. I also translated product updates, data, and call insights into Sales Excellence actions for 150+ professionals.

At Meu Barzin, I designed workflows using n8n, RAG, APIs, and Supabase/PostgreSQL, structured ICP and B2B prospecting, captured 505 leads, and used funnel analysis to identify insufficient partner density and 43.9% first-message dropout. At Munzner, a 10-stage CRM automation attracted 10,000+ visits and generated approximately R\$50,000.

I can contribute process mapping, AI agents and workflows, data integration, CRM, and pipeline measurement. I do not claim formal ABM, Apollo, or ZoomInfo experience; my transferable foundation is ICP development, personalization, prospecting, automation, data, and results-oriented GTM execution.

Kevin Augusto Vieira
