

Dear Techne team,

The mission of automating the Academy's content production combines my experience in applied AI, automation, digital education, and process improvement. At Wipro on the Meta Project, I led CRM AI adoption, increasing usage by 150%, and created training, playbooks, and a bootcamp that reduced ramp-up by 50%.

At Meu Barzin, I designed workflows using n8n, RAG, APIs, and Supabase, structured data from nearly 200 venues, and used funnel analysis to identify technical bottlenecks. At Munzner, I launched an LMS course and automated a content and nurturing funnel that attracted 10,000+ visits.

My alignment is strongest in workflow architecture, tool integration, and AI-assisted prototyping. I remain transparent about the requirements: my completed degree is in Philosophy, Engineering is incomplete, Python is practical and AI-assisted, and I have no documented HeyGen, text-to-video, or advanced software-engineering experience.

Kevin Augusto Vieira
