

Dear Wellhub team,

The GTM Program Manager role brings together my experience in commercial operations, automation, AI, and cross-functional coordination. At Wipro on the Meta Project, I connected global product lines, quality, and operations, translated updates into playbooks for 150+ professionals, and led CRM AI adoption, increasing usage by 150%.

At Meu Barzin, I designed workflows using n8n, APIs, RAG, and Supabase, defined the ICP and subscription model, and used funnel data to prioritize bottlenecks. I also bring experience with Salesforce, HubSpot, Make, A/B testing, Excel, Power BI, and revenue metrics.

My background aligns with building and improving GTM systems, while I remain transparent: my English is advanced/professional rather than claimed fluent; my SQL is basic; and I have not operated Clay or Salesloft in production. I do bring a practical automation foundation and rapid-learning approach to support Wellhub's new markets.

Kevin Augusto Vieira
